Research Interests

My research interests lie at the intersection of Deep Learning and Neuroscience, aiming to understand and reverse engineer neural computation. I aim to develop computational models of such neural circuits, with an overarching goal of designing efficient, biologically-constrained learning algorithms.

Research Experience

NeuroML Lab **Aug. 2024 – Present**
Supervisor: Prof. Meenakshi Khosla *La Jolla, CA*

- Working on developing methods to quantify representational similarity in artificial and biological neural networks.

Talmo Lab **May 2023 – Present**
Supervisor: Dr. Talmo Pereira *Salk Institute, La Jolla, CA*

- Working on the development of methods for pose estimation and tracking to quantify animal behavior through robust tracking of anatomical landmarks in 3D.
- Designing algorithms utilizing projective geometry to create inputs for a CNN that leverages geometric reasoning.

Senseable Intelligence Group **Jan. 2024 – July 2024**
Supervisor: Prof. Satrajit Ghosh *Massachusetts Institute of Technology, MA*

- Developed a distributed framework for large-scale ($\sim$ 1TiB) image segmentation for light-sheet microscopy images.
- Designed a domain-randomized generative model, using spherical harmonics to synthesize cortical sections of *ex-vivo* human brains to enable zero-shot segmentation.
- Worked on designing few-shot, *spatially* guided semantic segmentation algorithms for MRI segmentation.
- Proposed the use of a topologically aware Graph Neural Network which is capable of encoding spatial and anatomical constraints.

Synthetic Neurobiology Group **Feb. 2022 – Jan. 2024**
Supervisors: Prof. Ed Boyden, Prof. Donglai Wei *Massachusetts Institute of Technology, MA*

- Worked on the development of a *generalist* 3D segmentation model for Expansion Microscopy (ExM) volumes for various animal species.
- Proposed a human-in-the-loop feedback learning mechanism, built on top of an existing deep learning framework, NucMM.
- Worked on developing a new joint-intensity and point-based, high throughput image registration algorithms having nanoscale precision ($\mathbf{10-40}$ nm) for Multiplexed Expansion Revealing **(multiExR)**. This work is currently under review at Nature Communications.

Camera Culture Group **August 2022 – Dec. 2023**
Supervisor: Dr. Ramesh Raskar *Massachusetts Institute of Technology, MA*

- Worked on extracting environments from surfaces of glossy objects from sparse, and unstructured views.
- Explored methods that incorporate shape priors, which enable us to turn everyday objects having unknown geometry into radiance-field camera to image the world from an objects perspective.
